

TMR s2000

Powerful mid-size mailing and package receipt system

- **Single integrated system**
- **Designed for mid-size mailroom**
- **Manages inbound deliveries**
- **Processes mixed mail sizes**
- **Intuitive colour touch screen**
- **Franking up to 180 letters p/min**
- **Simple to learn and operate**

Powerhouse of Productivity

Part of TMR's sophisticated s-series of franking machines, which simplifies and integrates mailing and receiving into a single system, the s2000 is a powerhouse of productivity designed for the mid-sized mailroom. It offers all the advantages of Weigh-on-the-Way and Dimensions-on-the-Way technology and can process a stack of mixed mail at up to 180 letters per minute, applying the correct postage for each item. Its onboard receiving application, with optional barcode scanner, also logs all incoming packages and important documents, providing an audit trail of every item delivered to the mailroom.

Easy-To-Follow Menu

The s2000 mailing system guides operators with its easy-to-follow

menu on the 15 inch colour touch screen, enabling anyone within the organisation to easily operate the machine. For letter mail, it can send and print mail up to 16mm thick, at speeds up to 180 letters per minute, and users can simultaneously apply promotional messages in monotone or optional 4-process colour. With regular mailing costs rising and calculating postage increasingly complex, the s2000 can quickly improve productivity and cost-efficiency in the mailroom, assuring every job is done correctly, on time and at the right postage rate.

The s2000 is simple to learn and operate with its intuitive colour touch screen and menu-driven user interface

Mailmark Franking

Mailmark technology applies an intelligent 2D barcode that helps track mailed items with extreme precision. Royal Mail guarantees that items sorted using Mailmark will always benefit from the cheapest tariff available. The system also provides immediate price updates, faster franking and routine tracking reports, superseding SMART enabled franking machines.

Mixed Mail - WOW & DOW

The inline Weigh-on-the-Way and Dimensions-on-the-Way features provide the ability to automatically process mixed outbound mail, by verifying the length, width, thickness and weight of each item as it travels through the franking machine. There is no need to pre-sort mail into the same sizes and weights, so high volume mail runs become effortless, with the correct postage rate applied every time.

Envelope Messaging

To make the most of franked mail, you can turn every sent item into a powerful promotion, with your company logo and/or marketing message printed alongside the postage. With various pre-loaded options and bespoke settings, you can change the message by department, priority, season or offer, providing a professional finish without the need for printed stationery.

Postage Reporting

By linking the machine's postage meter directly to your secure online account, Inview Analytics provides easy-to-use access to every element of your postal expenditure. There are numerous standard reports to help manage your mail, or you can customise the system to your reporting requirements. This functionality is completely scalable for all business sizes and sites, providing world-class management and control, to help you save more.

Inbound Management

The receipt and management of inbound packages is streamlined, using onboard software and an optional digital scanner. The system instantly logs package information, including courier, recipient, sender and date & time of receipt, offering the option of alerting the in-house recipient by email. Total mailroom time savings of up to 75 minutes per day are possible.

Touch-screen Interface

The machine's detachable, touch-screen display enables authorised operators to select the required service from a series of drop-down screens, allowing any task to be completed quickly and efficiently. The system guides the user intuitively through all inbound and outbound mailroom processes.
