

# TMR d220

Print promotional messages on every envelope that's franked

- **Saves money every day**
- **Ideal for even smallest office**
- **Prints promotional messages**
- **5kg weighing platform**
- **Inline envelope stacker**
- **45 mailing pieces per minute**
- **Up to 100 internal accounts**

### Digital Machine

With processing speeds of up to 45 letters per minute, the d220 digital franking machine is perfect for the busy mailroom, sending upwards of 75 items a day. Its advanced features include a large LCD display prompting users through all processing applications; semi-automatic envelope feeding, transport and auto-eject; an integrated 5kg compact weighing platform for larger mail pieces; together with an accounting facility for tracking postage costs across 100 internal departments. A report printing capability additionally provides hard-copy records of all postage transactions.

### Mailmark Technology

The d220's Mailmark technology ensures that every piece of mail is sent

at a substantially lower cost than non-SMART franking machines or postage stamps. Additional Mailmark benefits include franked reply-paid envelopes, improved management reporting and the capacity to automatically reclaim VAT. The machine's inline moistener wets and seals envelopes, while the integrated stacker neatly arranges franked envelopes for mailing. Its ability to print promotional messages and graphics also means that mail is far more likely to be opened and read.

Printing promotional messages helps improve brand awareness and win new customers

Authorised independent inspector and maintainer of franking machines

## Mailmark Franking

Mailmark technology applies an intelligent 2D barcode that helps track mailed items with extreme precision. Royal Mail guarantees that items sorted using Mailmark will always benefit from the cheapest tariff available. The system also provides immediate price updates, faster franking and routine tracking reports, superseding SMART enabled franking machines.

## Processing Speed

To help customers compare efficiency, Letter Processing speeds provide the number of standardised letters a machine is able to frank in one minute, with a reduced number for WOW-enabled machines when running mixed mail. This rating is useful to know when scheduling mailing strategies and volume requirements.

## Differential Weighing

By determining the difference between the initial and residual weights of multiple items placed on the scale, this feature allows one item at a time to be removed and franked correctly. This is useful for when you have a multiple mail pieces with different weights, but all using the same class for postage, such as envelopes with varying numbers of enclosed pages.

## Accounts & Presets

To help speed up your mailing and keep departmental expenditure separate, franking machines can provide programmable shortcuts. Named departmental Postage Accounts allow you to track and report for specific business areas, such as Sales, HR and Accounts, whilst the most frequent mail runs can be allocated Job Presets, such as 2nd Class Signed For.

## Envelope Messaging

To make the most of franked mail, you can turn every sent item into a powerful promotion, with your company logo and/or marketing message printed alongside the postage. With various pre-loaded options and bespoke settings, you can change the message by department, priority, season or offer, providing a professional finish without the need for printed stationery.

## Postage Reporting

By linking the machine's postage meter directly to your secure online account, Inview Analytics provides easy-to-use access to every element of your postal expenditure. There are numerous standard reports to help manage your mail, or you can customise the system to your reporting requirements. This functionality is completely scalable for all business sizes and sites, providing world-class management and control, to help you save more.
