TMR **s3000**

High performance for integrated mailing, shipping and receipt of post

- **Streamlined outbound mailing**
- **Fastest machine in class**
- **Inbound package management**
- **Processes mixed weights & sizes**
- **Full-colour envelope printing**
- **Mailmark and SMART enabled**
- **Sets new standard for performance**

Fastest In Class

Innovative in technology and streamlined in style, the state-of-the-art TMR s series integrates the mailing, shipping and receiving of letters and packages into a single desktop system. The top of the line s3000 is the fastest in its class, processing up to 310 letters per minute, and prints your full colour promotional messages onto envelopes and labels, making every mailed item an opportunity to generate revenue. With sending costs rising and the logging of incoming packages ever more complex, the s3000 instantly improves productivity and cost-efficiency in the office or mailroom.

Simple Technology

Thanks to its intuitive, 15" colour touch-screen display, the TMR s3000 guides users with its easy-to-use menu screens, so that anyone within the organisation can operate this high powered system. It will seal and print mail up to16mm thick, while the standard Weigh-on-the-Way and Dimensions-on-the-Way functions will sort mixed-size mail automatically and apply the correct postage to each item, at up to 205 lpm. Meanwhile, the automated package-receiving application logs all inbound deliveries, giving a comprehensive view of what was received, when and for whom, as well as alerting recipients of incoming packages and documents.

Not only can you save up to 32% on postage with Mailmark franking technology, there are time savings on inbound tracking of nearly 50%

Royal Mail

Authorised independent inspector and maintainer of franking machines

We go **Beyond Mailing**

Mailmark Franking
Mailmark technology applies an intelligent 2D barcode that helps track mailed items with extreme precision. Royal Mail guarantees that items sorted using Mailmark will always benefit from the cheapest tariff available. The system also provides immediate price updates, faster franking and routine tracking reports, superseding SMART enabled franking machines.

Mixed Mail - WOW & DOW
The inline Weigh-on-the-Way and Dimensions-on-the-Way features provide the ability to automatically process mixed outbound mail, by verifying the length, width, thickness and weight of each item as it travels through the franking machine. There is no need to pre-sort mail into the same sizes and weights, so high volume mail runs become effortless, with the correct postage rate applied every time.

Full-Colour Printing
Studies show that colour headlines and graphics on envelopes and packages increase openability by 250%. This facility provides complete control over full-colour, envelope-width printing, enabling the user to upload graphics, business logos and promotional messages from any desktop PC, for applying onto envelopes and labels on franked mail.

Postage Reporting
By linking the machine's postage meter directly to your secure online account, Inview Analytics provides easy-to-use access to every element of your postal expenditure. There are numerous standard reports to help manage your mail, or you can customise the system to your reporting requirements. This functionality is completely scalable for all business sizes and sites, providing world-class management and control, to help you save more.

Inbound Management
The receipt and management of inbound packages is streamlined, using onboard software and an optional digital scanner. The system instantly logs package information, including courier, recipient, sender and date & time of receipt, offering the option of alerting the in-house recipient by email. Total mailroom time savings of up to 75 minutes per day are possible.

Online Connectivity
The system's web-enabled architecture provides online access to the internet, facilitating the downloading of updated software, the replenishment of postage values, access to Royal Mail services, tracking of packages and more, all via the colour touch-screen display. This facility also allows high-speed transfer of data to and from the system.
